

Why SET Bit was ON in Exercise Example 1

Dear Students,

You might be confused, when I started the HMI Simulation **the bit M0.0 was SET initially automatically**. It was because of a **mistake** while programming the HMI Screen (**not shows in the video**)

I accidentally wrote 'Event' for my 'Screen' to **Set Bit M0.0 which was causing this bit to be ON**.

Kindly ignore that. Just follows the steps and your code will work as expected.

Regards,

Rajvir
